

Enhancing Lync™ Productivity

Complete Call Handling Suite for Microsoft® Lync™ without Client

-  More telephony functions without **Client rollout**
-  **Installer** and **AD-Synchronization** simplifies deployment
-  **Certified** for Lync 2013
-  **New:** Administration via **Powershell**

Call Pickup

- **Pickup calls** for managers or colleagues
- Pickup **longest ringing** call
- **Centrally configurable** via Active Directory
- Users can be in **multiple pickup groups**

Second Call Treatment

- **Avoids interruptions**
- True **Busy on Busy** - prevents a connect charge
- **Redirect** 2nd call (i.e. Directly to voicemail)
- 2nd call is handled when 1st call is dialing/ringing

Call Forwarding

- Forward calls independent of Lync settings, can be used in parallel with Lync forwarding
- **Forward forwarded calls** including response group calls
- **Configurable centrally** or **individually** via FonComfort Settings tool for each Lync-User

External SimulRing

- **Simultaneously** ring external phones (PBX, DECT, or mobile phones)
- Replaces "Dual-Forking" feature from Microsoft OCS
- **Multi-Forking** is possible on several phones. For example, ring a PBX and mobile phone simultaneously

Central Administration

- Administration of all FonComfort settings with „Settings“ GUI application
- New: FonComfort Powershell enables script-based administration
- Delegates, teams, office hours are also configurable

FonComfort Server Administration

Central Administration

Configuration of user settings on the FonComfort server can be done with two mechanisms:

1. The administration tool FonComfort-Settings configures all settings centrally (using a specified RBOC administrator role)
2. AD security groups (e.g. Multiple pickup groups can be created by using the security groups naming convention by simply adding "Pickup" as part of the group name). Other synchronizations with AD entries can be customer specific and will be synchronised with a regular automatic update process.

FonComfort Settings

- FonComfort Settings application allows users to set presence and call forwarding options of manager or colleagues
- Full authorization rights must be granted for access

FonComfort Server Administration with Powershell

Mass Deployment

- Powershell administration enables script based administration
- Powerful tool for automated user setup
- Available for all FonComfort configurations
- Lync configurations such as delegates, teams, office hours, holidays can be configured centrally!
- Replaces Microsoft tool SEFAUTIL

```
Administrator: FonComfort PowerShell
PS C:\Users\Administrator.BRESSNER\ Desktop> Get-FCUser -Identity manager2@bressner.de
